

Unified platform for Suppliers to receive bills and key messages

- ❖ Enput is a free tool which will revolutionise the way energy suppliers validate, enter, pay their industry bills and receive key messages from a single portal
- ❖ It will take away countless hours of receiving and inputting hundreds of bills received from MOPs, MAMs, DC/DAs, Distributors, Transmitters etc. Suppliers can simply download the bills for free without sorting, segregating and forwarding bills received in tons of emails from different industry players
- ❖ As a paid service, suppliers can automatically get their bills validated and converted into a format that can be easily imported into their accounting system without any manual intervention. Bill validation highlights the bill discrepancies on failed validations, rejects the bill and sends it back to the industry players for correction before actually paying it
- ❖ The right employee at the supplier organisation can receive broadcasted messages at one place without missing out any important information
- ❖ Available capacity for HH CT meters can be easily seen by the suppliers at a single portal along with history of changes in available capacity

Benefits

1. Get all your industry bills, key messages and available HH capacity on a single, easy to use platform
2. Validating bills automatically against pre-defined parameters and contracts saves paying incorrect amount and can get credit notes issued by the industry players without spending any effort
3. Pay the correct amount every time and on time
4. Save several hours of efforts in manually entering bills in accounting system; save resources, efforts and costs
5. Single and easy to use platform
6. Efficient workflows
7. Never miss any important information, messages or bills
